Subject: SLICE FLEX Quick-Release Design Upgrade	
Affects: 13000-30550 and 13000-30470	Date: 1 August 2014
Immediate action required: Customer action required upon receipt.	For additional information, contact: support@dtsweb.com or submit a request via support.dtsweb.com

The SLICE FLEX quick-release cable system has been redesigned to address concerns of long-term survivability. Customers ordering the SLICE FLEX quick-release bracket (P/N 13000-30470), will be provided with a spacer that should be incorporated into the mating SLICE FLEX latching chain cable (P/N 13000-30550). This will allow for continued quick-release functionality. The spacer (P/N 89100-17710) provided is shown below.

Upgrade instructions:

- 1) Unscrew the FLEX leg locking mechanism from the FLEX latching backshell. Retain the screws (socket cap, 18-8 SS; 2-56 x 1/4") and washers (flat, 18-8 SS; #2, 1/4" OD) for reuse.

- 2) Place the spacer provided on top of the FLEX latching backshell and re-assemble the quick-release portion of the cable using original screws and washers.

- 3) Re-connect with mating cable, and upgrade is complete.
